

FieldTurf was developed and engineered for athletes, by athletes. The company worked closely with athletes, former players, coaches, trainers, and doctors. Development included years of trials, tests, samples, equipment innovations and advanced formulas – all with the goal of developing an artificial turf system that combined the performance properties of natural grass with the benefits of a synthetic solution. It worked.

- FieldTurf fields have hosted The Super Bowl, BCS National Championship Games, World Cup Matches, The World Series, and the World Baseball Classic
- 21 of 32 NFL teams currently play and/or practice on FieldTurf
- Year after year, more NCAA bowl games are played on FieldTurf than all other turf brands combined
- FieldTurf was the first synthetic turf system to receive the coveted FIFA Recommended status in soccer
- FieldTurf has a documented positive environmental impact
- Patented heavy infill has proven to protect muscles and joints
- Uniform traction, with superior shock absorption and durability
- Proven to contribute to less injuries than natural grass in NCAA soccer and football
- Over 3500 installations in North America
